

## A few remarks on fetch

- To enable cache busting fetch exploits its cache property set to no-cache:

```
fetch(url, {  
  cache: 'no-cache'})  
  .then(response => response.json())  
  .then(data => console.log(data));
```

## A few remarks on fetch

- If it is not specified, the HTTP method used by fetch is GET
- Let's see an example using POST:

```
fetch(url, {  
  method: 'POST',  
  headers: { 'Content-Type': 'application/json' },  
  body: JSON.stringify({ name: 'Giovanna' }) });
```
